

RETROFIT PROGRAM SOLAR PHOTOVOLTAIC SYSTEMS

The Save on Energy Retrofit program now offers eligible Ontario businesses behind-the-meter solar photovoltaic (PV) systems for load displacement.

There are two categories of eligible solar PV systems:

1

Micro-generation for PV installations that are up to 10kW at \$1000/kW-DC.

2

Small/medium generation for PV installations that are greater than 10kW-AC, up to 1MW-AC, at \$860/kW-AC.

WHY GO SOLAR?

Installing solar PV systems helps:

Reduce costs by lowering metered energy consumption

Generate clean, renewable energy year-round

Decrease greenhouse gas emissions*

APPLY NOW

To get started, visit saveonenergy.ca/retrofit for more information and to apply.

WILL A SOLAR RETROFIT BE A GOOD FIT FOR MY COMPANY?

Any commercial, industrial or institutional business is eligible to receive this incentive. The system must be mounted on new or existing building rooftop(s) or walls. Some suitable facilities include large offices, universities, colleges, hotels, car dealerships and facilities with parking lot canopies.¹

The solar systems are intended for load displacement; therefore, the size of the solar panel array cannot exceed the maximum load of your facility.

¹ Systems larger than 1,000 kW AC can be eligible; however, the incentive amount will be capped at 1,000 kW AC and at 50% of total eligible project costs (including labour and materials).

GET STARTED

1. Contact your local distribution company (LDC) to discuss the connection process and the allowable maximum capacity of the solar PV system.
2. Submit a Retrofit application for review through the Save on Energy Retrofit portal and receive an application pre-approval.
3. Receive approval to connect from your LDC and install your project.
4. Receive approval from Save on Energy for your post-project Retrofit application and Retrofit incentive invoice.

DEADLINES

To qualify for a Retrofit incentive, you must complete the steps above no later than 24 months after your Retrofit application is pre-approved.
