

TUNE UP YOUR MEDICAL CLINIC OR OFFICE.

GET RID OF ENERGY WASTE AND ENHANCE PATIENT CARE.

Ventilation or air quality requirements to protect patient health often lead to energy inefficiencies in clinics and medical office buildings. **Existing building commissioning (EBCx)** offers a process to optimize HVAC system energy performance while satisfying air quality requirements and maintaining or improving patient comfort and care.

EBCx has many benefits, including:

Decreases maintenance and energy costs

Extends equipment life

Improves ventilation and air quality

Addresses persistent issues such as noise, temperature and pressure to improve patient comfort and care

Reduces greenhouse gas emissions

Enhances operator training and expertise

Consider EBCx if:

- Ventilation requirements for any spaces have changed
- You receive regular complaints, such as about air or water temperature, odours, or noises
- Doors blow open or get stuck closed
- Any space uses have changed – particularly patient care or examination rooms, laboratory spaces and surgical suites
- Your clinic or medical office building uses more energy than expected, or more than similar facilities

Managing EBCx Projects

Assign an internal leader such as a project or facilities manager to coordinate the process, provide information about the building, numbers of practitioners and patients, operation schedules and current issues or complaints. The internal leader should expect to be closely involved in the planning stage and to accompany the EBCx provider for several days over six to twelve months during the investigation and implementation stages.

What to look for in an EBCx provider

- Excellent communication skills
- Expertise in ventilation and mechanical systems and automation controls

What to expect from your EBCx provider

- EBCx plan with current facility requirements (CFR)
- Investigation findings log
- Detailed implementation plan
- Persistence plan and staff training

Save on Energy incentives are available for your next EBCx project!

- Receive a 50 percent incentive for completing [EBCx training courses](#)
- The EBCx program offers incentives to participants who undertake EBCx activities and achieve energy savings. [Learn more and apply here.](#)

THE EBCx PROCESS

1. Planning

- **Building owner or internal leader** selects an EBCx provider from the list of [qualified commissioning providers](#) for the EBCx program.
- **EBCx provider** leads interviews and a building walk-through with operations and maintenance staff to plan and prioritize detailed investigation activities.
- **Deliverable:** EBCx plan that lays out the steps of the EBCx process for your building.

2. Investigation

- **EBCx provider** conducts a detailed investigation of the site to ensure mechanical systems are operating properly and to identify performance issues. This involves on-site inspections and monitoring equipment performance with data loggers over several months.
- **Deliverable:** Findings log with savings estimates.

3. Implementation

- **Deliverable:** Implementation plan, including: recommended actions, roles and responsibilities, timeline, verification and monitoring requirements, and operator training and persistence activities.
- Implementation may be led by the internal leader or the EBCx provider, and should be guided by the implementation plan.

4. Hand-off

- **Deliverable:** Persistence plan to guide operations and maintenance actions over time, to maintain energy and performance improvements.
- EBCx provider trains building staff in persistence strategies.
